Deliverable#03: “Event & Venue Booking Platform”

USE CASE 01

Use Case Section	Comment	
Use Case Name	Account Management (Register Account)	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	User/Customer	
Stakeholders and Interest	User/Customer: Wants to create an account quickly and securely to access booking services Administrator: Wants to create an account and maintain a database of registered users for system management and communication.	
Main Success Scenario	Actor Action	System Response
	1. User launches the Event & Venue Booking application.	
		2. System displays the main screen with login and registration options.
	3. User selects "Register New Account" option	
		4. System displays the registration form requesting: full name, email address, phone number, password, and password confirmation.
	5. User enters all required information	
		6. User clicks "Submit Registration" button

	7. System validates all input fields (format, completeness, password strength)	
		8. System checks that the email address is not already registered
	9. System encrypts the password	
		10. System creates a new user account and stores it in the database
	11. System generates a unique user ID	
		12. System displays success message with registration confirmation
	13. System redirects user to login page	
Extensions	➤ Invalid data format. ➤ Email address already exists. ➤ User cancels registration. ➤ Password and confirmation do not match.	
Pre-conditions	The user does not have an existing account with the provided email address	
Post condition	➤ A new user account is created in the system database ➤ User credentials are securely stored ➤ User receives confirmation of successful registration ➤ User can now login to the system	

USE CASE 02

Use Case Section	Comment
Use Case Name	Account Management (Login)
Scope	Event and Booking Management System
Level	User goal
Primary Actor	User/Customer and Administrator

Stakeholders and Interest	User/Customer: Wants secure and quick access to personal account and booking features Administrator: Wants secure access to administrative functions and system management tools.	
Main Success Scenario	Actor Action	System Response
	1. Actor launches the Event & Venue Booking application	
		2. System displays the main screen with login and registration options.
	3. Actor enters registered email address	
	4. Actor enters password	
	5. Actor clicks "Login" button	
		6. System validates the credentials against the database
		7. System verifies that the account is active and not suspended
		8. System authenticates the actor successfully
		9. System creates a session for the actor
		10. System identifies the actor's role (User or Administrator)
		11. System logs the login activity with timestamp
		12. System redirects to the appropriate dashboard based on role
		13. System displays welcome message with actor's name
Extensions	➤ Invalid credentials. ➤ Too many failed attempts. ➤ Account suspended. ➤ Forgot password. ➤ Empty fields.	
Pre-conditions	Actor has a registered account in the system.	

Post condition	➤ Actor is authenticated and logged into the system ➤ Session is created for the actor ➤ Actor is redirected to appropriate dashboard (user or admin) ➤ Login activity is logged in the system
----------------	---

USE CASE 03

Use Case Section	Comment
Use Case Name	Forgot Password
Scope	Event and Booking Management System
Level	User goal
Primary Actor	User/Customer and Administrator
Stakeholders and Interest	User/Customer: Wants to quickly and securely recover access to their account when password is forgotten Administrator: Wants to regain account access without security compromise

Main Success Scenario	Actor Action	System Response
	1. Actor is on the login page	
	2. Actor clicks "Forgot Password?" link	
		3. System displays password recovery form
		4. System prompts actor to enter registered email address
	5. Actor enters email address	
	6. Actor clicks "Send Reset Link" button	
		7. System validates email format
		8. System checks if email exists in the database
		9. System generates unique password reset token with expiration time (valid for 1 hour)
		10. System stores reset token in database linked to user account
		11. System sends password reset email to the address containing reset link with token and expiration notice
		12. System displays confirmation message "Password reset link has been sent to your email"
	13. Actor checks email inbox and clicks the reset link	
		14. System validates the reset token (checks if valid and not expired) 15. System displays new password creation form
	16. Actor enters new password and confirms password	
		17. System validates password strength (minimum 8 characters, includes letters and numbers)

		18. System verifies password and confirmation match
		19. System encrypts the new password
		20. System updates password in database
		21. System invalidates the reset token
		22. System logs password change activity with timestamp
		23. System displays success message "Password reset successfully"
		24. System redirects actor to login page
	25. Actor can now login with new password	
Extensions	➤ Invalid email format. ➤ Email not found in system. ➤ Weak password. ➤ Passwords do not match. ➤ Actor doesn't receive email. ➤ Actor reuses old password. ➤ Empty fields.	
Pre-conditions	➤ Actor has a registered account in the system ➤ Actor has access to the registered email address	
Post condition	➤ Password reset link is sent to actor's registered email ➤ Actor can create a new password using the reset link ➤ Old password becomes invalid after successful reset ➤ Password reset activity is logged for security audit ➤ Actor can login with new password	

USE CASE 04

Use Case Section	Comment	
Use Case Name	Search Venues	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	User/Customer	
Stakeholders and Interest	User/Customer: Wants to quickly find suitable venues matching their event requirements and preferences. Venue Manager: Wants their venues to be easily discoverable by potential customers	
Main Success Scenario	Actor Action	System Response
	1. User navigates to the "Search Venues" section from the dashboard	
		2. System displays the search interface with multiple filter options
	3. User enters search criteria including: event type (wedding, seminar, conference, workshop), date range, capacity required, location/area, and price range	
	4. User clicks "Search" button	
		5. System validates the entered criteria
		6. System queries the database for venues matching all specified criteria
		7. System retrieves matching venues with their basic details
		8. System checks availability for each venue during the specified date range
		9. System ranks results based on relevance, availability, and popularity
		10. System displays search results in a list/grid view showing venue name, image,

		capacity, location, and price per day
		11. System shows the total number of results found
	12. User browses through the search results	
Extensions	➤ No venues match the criteria. ➤ Invalid date range ➤ If User searches without entering any criteria	
Pre-conditions	➤ User is logged into the system ➤ At least one venue exists in the system database ➤ User has navigated to the venue search interface	
Post condition	➤ System displays a list of venues matching the search criteria ➤ Search results are ranked by relevance ➤ User can view basic information about each venue in the results	

USE CASE 05

Use Case Section	Comment	
Use Case Name	Check Availability	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	User/Customer	
Stakeholders and Interest	User/Customer: Wants to know exact dates when a venue is available before making a booking decision Venue Manager: Wants to provide accurate availability information to prevent double bookings Administrator: Wants to maintain accurate scheduling data across all venues	
Main Success Scenario	Actor Action	System Response
	1. User selects a specific venue (from search results or venue list)	
	2. User clicks "Check Availability" button	

		3. System retrieves the venue's booking schedule from the database
		4. System displays a calendar view for the next 6 months
		5. System marks dates with different colors: green for available, red for booked, yellow for pending approval
		6. System shows booking details on hover for unavailable dates (event type, duration)
	7. User selects a desired date range by clicking start and end dates on the calendar	
		8. System validates that the selected date range is available
		9. System displays confirmation message "This venue is available for your selected dates"
		10. System calculates and displays estimated cost for the selected period
		11. System displays venue capacity and amenities information
	12. User reviews the availability information	
Extensions	➤ Selected dates are not fully available ➤ Selected dates have pending bookings ➤ User selects past dates ➤ User wants to book the venue	
Pre-conditions	➤ User is logged into the system ➤ User has selected a specific venue to check ➤ The venue exists in the system database ➤ Venue has an associated schedule in the system	
Post condition	➤ System displays accurate availability calendar for the selected venue ➤ User can see booked, available, and pending dates ➤ User has the information needed to make a booking decision	

USE CASE 06

Use Case Section	Comment	
Use Case Name	Submit Booking Request	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	User/Customer	
Stakeholders and Interest	User/Customer: Wants to easily submit a complete booking request and receive confirmation Venue Manager: Wants accurate event details for proper venue preparation	
Main Success Scenario	Actor Action	System Response
	1. User clicks "Submit Booking Request" after checking availability	
		2. System displays the booking request form pre-filled with venue name and selected dates
		3. System prompts user to enter additional details: event name, event type (wedding, seminar, conference, etc.), expected number of attendees, special requirements/requests, contact person name, and contact phone number
	4. User fills in all required information	
	5. User reviews the booking summary showing venue, dates, duration, estimated cost, and event details	
	6. User accepts the terms and conditions checkbox	
	7. User clicks "Submit Request" button	
		8. System validates all required fields are complete

		9. System verifies that the selected dates are still available
		10. System generates a unique booking reference number
		11. System creates booking record in database with "Pending" status
		12. System marks the selected dates as "pending" in venue schedule
		13. System sends notification to administrator for review
		14. System displays success message with booking reference number
		15. System sends confirmation email to user with booking details
Extensions	➤ Required fields are missing. ➤ Dates are no longer available. ➤ Invalid attendee number. ➤ User does not accept terms and conditions. ➤ User wants to add special requirements. ➤ User wants to save as draft.	
Pre-conditions	➤ User is logged into the system ➤ User has checked availability for a specific venue ➤ Selected dates are available or in pending status ➤ User has selected valid date range ➤ Venue is active and accepting bookings	
Post condition	➤ Booking request is created in the database with "Pending" status ➤ Administrator is notified of the new booking request ➤ User receives booking request confirmation with reference number ➤ Selected dates are marked as "pending" in the venue calendar ➤ Email confirmation is sent to the user	

USE CASE 07

Use Case Section	Comment	
Use Case Name	View Booking Status	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	User/Customer and Administrator	
Stakeholders and Interest	User/Customer: Wants to track the status of their booking requests and see approval decisions Administrator: Wants users to have transparency about booking statuses to reduce inquiries	
Main Success Scenario	Actor Action	System Response
	1. User navigates to "My Bookings" section from the dashboard	
		2. System retrieves all booking records associated with the user's account
		3. System displays bookings organized by status tabs: Pending, Approved, Rejected, Cancelled, Completed
		4. System shows list of bookings with booking reference number, venue name, event date, submission date, and current status
	5. User selects a specific booking to view details	
		6. System displays complete booking information including venue details, event information, special requirements, status history with timestamps, and administrator comments (if any)
		7. System displays appropriate action buttons based on status (Cancel if pending/approved, View Payment if approved)

	8. User reviews the booking details and status information	
Extensions	➤ User has no bookings ➤ Booking is approved ➤ Booking is rejected ➤ Booking is pending ➤ User wants to view payment details. ➤ User wants to print booking confirmation.	
Pre-conditions	➤ User is logged into the system ➤ User has submitted at least one booking request ➤ Booking records exist in the database for the user	
Post condition	➤ User views current status of all their bookings ➤ User has up-to-date information about their booking requests ➤ User can take appropriate action based on booking status	

USE CASE 08

Use Case Section	Comment	
Use Case Name	View Payment Records	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	User/Customer and Administrator	
Stakeholders and Interest	User/Customer: Wants to view payment history, due amounts, and payment status for transparency Administrator: Wants users to have access to payment information to reduce payment-related queries.	
Main Success Scenario	Actor Action	System Response
	1. User navigates to "Payment Records" section from dashboard	

	or from a specific booking	
		2. System retrieves all payment records associated with user's account
		3. System displays list of bookings with payment information including booking reference, venue name, event date, total amount, paid amount, balance due, and payment status (Paid, Partial, Pending, Overdue)
		4. System highlights overdue payments in red
	5. User selects a specific payment record to view details	
		6. System displays detailed payment breakdown: venue rental fee, security deposit, additional services charges, taxes, total amount, and payment schedule
		7. System shows payment transaction history with date, amount, payment method, transaction ID, and receipt number for each transaction
		8. System displays downloadable receipt links for completed payments
	9. User reviews the payment information	
Extensions	➤ No payment records exist ➤ Payment is overdue ➤ User wants to download receipt	
Pre-conditions	➤ User is logged into the system ➤ User has at least one approved booking ➤ Payment record exists in the database associated with user's booking	
Post condition	➤ User views detailed payment information for their bookings	

	➤ User knows outstanding payment amounts and due dates ➤ User has access to payment receipts and transaction history
--	---

USE CASE 09

Use Case Section	Comment	
Use Case Name	Cancel Booking	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	User/Customer and Administrator	
Stakeholders and Interest	User/Customer: Wants to cancel booking when plans change, understanding cancellation policies Administrator: Wants to process cancellations efficiently and update availability. Venue Manager: Needs to know about cancellations to make venue available for others	
Main Success Scenario	Actor Action	System Response
	1. User navigates to "My Bookings" section	
	2. User selects the booking they want to cancel	
	3. User clicks "Cancel Booking" button	
		4. System displays cancellation policy including refund terms based on days before event, applicable fees, and refund processing time
		5. System displays cancellation confirmation dialog requesting cancellation reason
	6. User selects reason from dropdown (Change of plans, Found alternative venue, Financial reasons, Event cancelled, Other)	

	7. User optionally provides additional comments	
	8. User confirms cancellation by clicking "Confirm Cancellation"	
		9. System validates that booking can still be cancelled (not past cancellation deadline)
		10. System updates booking status to "Cancelled" in database
		11. System releases the booked dates back to available status
		12. System calculates refund amount based on cancellation policy and payment status
		13. System creates cancellation record with timestamp and reason
		14. System sends notification to administrator about cancellation
		15. System displays cancellation confirmation with reference number and refund information
		16. System sends confirmation email to user with cancellation details
Extensions	➤ Cancellation deadline has passed ➤ Event date has passed ➤ No payment made yet	
Pre-conditions	➤ User is logged into the system ➤ User has an existing booking with status "Pending" or "Approved" ➤ Booking has not already been cancelled or completed ➤ Current date is before the event date	
Post condition	➤ Booking status is changed to "Cancelled" ➤ Venue dates are released back to available status ➤ Administrator is notified of the cancellation ➤ Cancellation is recorded with reason and timestamp ➤ User receives cancellation confirmation	

	➤ Refund processing is initiated based on cancellation policy
--	---

USE CASE 10

Use Case Section	Comment	
Use Case Name	Manage Venues	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	Venue manager and Administrator	
Stakeholders and Interest	User/Customer: Wants accurate and up-to-date venue information for booking decisions Administrator: Wants efficient tools to add, update, or remove venue information	
Main Success Scenario	Actor Action	System Response
	1. Administrator navigates to "Manage Venues" section from admin dashboard	
		2. System displays list of all venues with venue name, location, capacity, status (Active/Inactive), and last updated date
	3. Administrator clicks "Add New Venue" button	
		4. System displays venue creation form requesting venue name, location/address, capacity (number of people), description, amenities (parking, AV equipment, catering, WiFi, etc.), rental price per day, venue type (hall, conference room, outdoor, etc.), and venue images
	5. Administrator enters all required venue information	

	6. Administrator uploads venue photos	
	7. Administrator sets venue status (Active/Inactive)	
	8. Administrator clicks "Save Venue" button	
		9. System validates all required fields are complete
		10. System checks that venue name is unique
		11. System generates unique venue ID
		12. System saves venue information to database
		13. System uploads and links images to venue record
		14. System displays success message "Venue added successfully"
		15. System refreshes venue list showing new venue
Extensions	➤ Required fields missing ➤ Venue name already exists. ➤ Administrator wants to edit existing venue ➤ Administrator wants to delete venue. ➤ Invalid capacity value.	
Pre-conditions	➤ Administrator is logged into the system with admin privileges ➤ Administrator has navigated to venue management section	
Post condition	➤ Venue database is updated with accurate information ➤ Changes are reflected immediately in user-facing venue listings ➤ Audit trail is created for venue modifications ➤ Users see updated venue information	

USE CASE 11

Use Case Section	Comment
Use Case Name	Review Booking Requests
Scope	Event and Booking Management System

Level	User goal	
Primary Actor	Administrator	
Stakeholders and Interest	User/Customer: Wants timely review and decision on their booking request Administrator: Wants to efficiently review and evaluate booking requests with all necessary information Venue Manager: Needs bookings to be properly vetted before approval	
Main Success Scenario	Actor Action	System Response
	1. Administrator navigates to "Booking Requests" section from admin dashboard	
		2. System retrieves all pending booking requests from database
		3. System displays list of pending requests sorted by submission date showing booking reference, customer name, venue name, event date, submission date, and priority indicators
		4. System highlights urgent requests (events approaching, or requests pending beyond normal review time)
	5. Administrator selects a specific booking request to review	
		6. System displays comprehensive booking details including customer information (name, email, phone, organization), venue details (name, location, capacity), event information (type, date range, expected attendees, special requirements), pricing information, and customer booking history
		7. System displays venue availability calendar showing the requested dates
		8. System checks for scheduling conflicts with other bookings

		9. System displays customer's previous booking history and payment record
	10. Administrator reviews all information carefully	
	11. Administrator may add internal notes or comments about the request	
	12. Administrator closes the detailed view to continue reviewing other requests or proceed to approval/rejection	
Extensions	➤ No pending requests ➤ Customer has poor payment history. ➤ Administrator wants to contact customer	
Pre-conditions	➤ Administrator is logged into the system ➤ At least one booking request with "Pending" status exists ➤ Administrator has necessary permissions to review bookings	
Post condition	➤ Administrator has reviewed booking request details ➤ Administrator has sufficient information to make approval decision ➤ Booking request remains in system awaiting decision ➤ Review activity is logged	

Use Case: 12

Use Case Section	Comment
Use Case Name	Approve/Reject Booking
Scope	Event and Booking Management System
Level	User goal
Primary Actor	Administrator

Stakeholders and Interest	Administrator: Wants to make informed decisions and communicate them clearly to customers User/Customer: Wants timely decision with clear reasoning, especially if rejected Venue Manager: Wants confirmed bookings to prepare venue appropriately	
Main Success Scenario (Approve)	Actor Action	System Response
	1. Administrator clicks "Approve Booking" button after reviewing request.	
		2. System displays an approval confirmation dialog.
	3. Administrator reviews the displayed booking summary (customer, venue, dates, amount).	
		4. System validates that the selected dates are still available.
	5. Administrator enters payment detail like total amount, deposit amount, remaining balance, payment due date, and payment instructions.	
	6. Administrator optionally adds approval comments or special instructions.	
	7. Administrator clicks "Confirm Approval" to finalize the approval.	
		8. System updates booking status to "Approved."
		9. System marks the dates as booked in the venue calendar.
		10. System creates a payment record using the entered payment terms.
		11. System generates a booking confirmation document.
		12. System sends an approval email to the customer with

		booking details, payment info, and confirmation document attached.
		13. System displays success message: "Booking approved successfully."
Extensions	➤ Dates no longer available.	
Pre-conditions	➤ Administrator is logged into the system ➤ Administrator has reviewed a specific booking request ➤ Booking request has "Pending" status ➤ Requested dates are still available (for approval)	
Post condition	➤ Booking status is updated to "Approved" or "Rejected". ➤ Customer is notified of the decision via email and system notification. ➤ If approved, dates are confirmed in venue calendar. ➤ If rejected, dates are released back to available status. ➤ Decision is logged with reason and timestamp. ➤ Payment record is created (if approved).	
Main Success Scenario (Reject)	Actor Action	System Response
	Administrator clicks "Reject Booking" button after reviewing request.	
		System displays rejection dialog.
	Administrator reviews booking summary	
		System prompts administrator to select rejection reason from dropdown.
	Administrator selects a reason and provides a detailed explanation.	
		System validates explanation and updates booking status to "Rejected".
	Administrator optionally suggests alternative venues or dates and confirms rejection.	
		System releases dates, logs rejection, sends rejection email and dashboard notification, and displays success message "Booking rejected successfully".

USE CASE 13

Use Case Section	Comment	
Use Case Name	View Payment Records (Administrator)	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	Administrator	
Stakeholders and Interest	Administrator: Wants to monitor all payment transactions, track outstanding payments, and manage financial records. User/Customer: Expects their payment information to be accurately maintained and accessible.	
Main Success Scenario	Actor Action	System Response
	1. Administrator navigates to "Payment Management" section from admin dashboard.	
		2. System displays payment overview dashboard showing total revenue collected, pending payments amount, overdue payments count, payments received today, and monthly revenue chart.
		3. System displays comprehensive list of all payment records sorted by date showing booking reference number, customer name, venue name, event date, total amount, paid amount, balance due, payment status (Paid, Partial, Pending, Overdue), and last payment date.
		4. System color-codes payment statuses:

		green for fully paid, yellow for partial, orange for pending, red for overdue.
	5. Administrator can filter payments by status (Paid/Partial/Pending/Overdue), date range, venue, or customer name.	
	6. Administrator selects a specific payment record to view details.	
		7. System displays comprehensive payment information including customer details (name, email, phone, organization), booking details (venue, event date, booking reference), payment breakdown (venue rental fee, security deposit, additional charges, taxes, discounts, total amount), payment schedule (installment plan if applicable), and transaction history.
		8. System shows complete transaction log with date and time, amount paid, payment method (cash, bank transfer, check), transaction reference number, received by (administrator name), and receipt number.
		9. System displays any payment-

		related notes or comments from administrators.
	10. Administrator can view and download all receipts issued for this booking.	
Extensions	➤ Administrator filters by overdue payments. ➤ Administrator wants to record new payment. ➤ Administrator wants to mark payment as overdue. ➤ Administrator wants to send payment reminder. ➤ Administrator wants to export payment data. ➤ Administrator wants to issue refund.	
Pre-conditions	➤ Administrator is logged into the system with admin privileges. ➤ Payment records exist in the database. ➤ Administrator has necessary permissions to access financial data.	
Post condition	➤ Administrator has reviewed payment information. ➤ Administrator has current status of all payments across the system. ➤ No changes are made to payment records (view-only operation). ➤ Access activity is logged for audit purposes.	

USE CASE 14

Use Case Section	Comment	
Use Case Name	Generate Reports	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	Administrator	
Stakeholders and Interest	Administrator: Wants comprehensive reports for monitoring system performance and making decisions. Venue Manager: Wants to know which venues are most popular and profitable.	
Main Success Scenario	Actor Action	System Response
	1. Administrator navigates to "Reports" section from admin dashboard.	
		2. System displays report generation interface with report type options: Booking Summary Report,

		Revenue Report, Venue Utilization Report, Customer Activity Report, Payment Status Report, Popular Venues Report.
	3. Administrator selects desired report type.	
		4. System displays configuration options for selected report including date range (from date to date), venue filter (all venues or specific), status filter (approved, pending, rejected, cancelled), and export format (PDF, Excel, CSV).
	5. Administrator selects date range for the report.	
	6. Administrator optionally applies filters (specific venues, booking status).	
	7. Administrator selects export format.	
	8. Administrator clicks "Generate Report" button.	
		9. System validates the date range(end date after start date).
		10. System queries database for relevant data based on selected criteria.
		11. System performs calculations and aggregations (totals, averages, percentages).
		12. System generates report with summary statistics, detailed data tables, and visualizations. (charts/graphs where applicable)
		13. System displays report preview on screen with key metrics highlighted.
	14. Administrator reviews the generated report.	

	15. Administrator clicks "Export" button.	
		16. System generates report file in selected format.
		17. System initiates download of report file.
Extensions	➤ No data available for selected criteria. ➤ Booking Summary Report selected. ➤ Administrator wants to modify report parameters. ➤ Administrator wants to print report. ➤ Administrator wants to email report.	
Pre-conditions	➤ Administrator is logged into the system. ➤ Booking and payment data exists in the database. ➤ Administrator has necessary permissions to generate reports. ➤ System has reportable data for selected time period.	
Post condition	➤ Report is generated with accurate data. ➤ Report is displayed to administrator. ➤ Report can be exported in specified format. ➤ Report generation activity is logged. ➤ Data remains unchanged in database.	

USE CASE 15

Use Case Section	Comment	
Use Case Name	Logout	
Scope	Event and Booking Management System	
Level	User goal	
Primary Actor	User/Customer or Administrator	
Stakeholders and Interest	User/Customer: Wants to securely end their session to protect account information, especially on shared computers. Administrator: Wants to securely end their session to protect sensitive system data and administrative functions.	
Main Success Scenario	Actor Action	System Response
	1. Actor clicks on "Logout" button available in the navigation bar/menu.	
		2. System displays logout confirmation dialog asking "Are you sure you want to logout?".

	3. Actor confirms logout by clicking "Yes, Logout" button.	
		4. System validates the active session.
		5. System saves any auto-saved data (if applicable).
		6. System invalidates the current session token.
		7. System clears session data from server memory.
		8. System clears any cached user data from application.
		9. System logs the logout activity with actor ID, timestamp, and session duration.
		10. System displays logout success message "You have been logged out successfully".
		11. System redirects actor to the login page.
		12. System ensures all protected routes are now inaccessible without re-authentication.
Extensions	➤ Actor closes browser without logging out. ➤ Unsaved changes detected. ➤ Active file downloads in progress.	
Pre-conditions	➤ Actor (User or Administrator) is currently logged into the system. ➤ Active session exists for the actor. ➤ Actor is on any page within the application.	
Post condition	➤ Actor's session is terminated and invalidated. ➤ Actor is logged out of the system. ➤ Actor is redirected to the login page. ➤ Session data is cleared from system memory. ➤ Logout activity is logged with timestamp. ➤ Actor cannot access protected pages without logging in again.
